OBJECTIVE

Computer Science and Engineering undergraduate with hands-on experience in software development, machine learning, and IoT. Skilled in Python, Java, SQL, and web development, with a strong foundation in analytical problem-solving and a track record of building functional, end-to-end projects. Seeking a software development or ML engineering role to apply technical skills and deliver practical, high-quality solutions.

EDUCATION

B.Tech, Computer Science & Engineering	06/2023 – 06/2027
Swami Vivekananda Institute of Science & Technology, MAKAUT — Kolkata, WB	
Class XII (WBCHSE) — 91%	05/2022
Tentulia Sarrang N.N. High School (H.S.) — Sarrang, WB	
Class X (WBBSE) — 82%	07/2020
Tentulia Sarrang N.N. High School (H.S.) — Sarrang, WB	

TECHNICAL SKILLS

Core CSE: DSA, Algorithms, OOPS, Computer Network
Programming: C, Python, Java, JavaScript, PHP
AI / ML: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn
Software Tools: Google Colab, MySQL, VS Code, Git, GitHub

PROJECTS

AI Crop Yield Prediction — SIH 2025	06/2025 – 09/2025
Python Scikit-learn Pandas NumPy XGBoost Google Colab	
- Built an AI-powered crop yield prediction system using XGBoost to forecast production from historical agricultural and environmental data, selected for Smart India Hackathon 2025. - Benchmarked multiple regression models (Linear Regression, Random Forest, XGBoost); XGBoost delivered the highest prediction accuracy among models tested. - Supported data-driven crop planning and resource optimization for farmers through interpretable model outputs and visualizations.	
PHP-Based Online Book Shopping Platform	06/2024 – 08/2024
PHP JavaScript SQL MySQL HTML5 CSS3	
- Built a full-stack e-commerce platform for browsing, searching, and purchasing books through a secure, user-friendly interface. - Implemented user authentication, shopping cart, and database-driven order management using PHP and MySQL. - Designed the inventory/order schema to give bookstore admins real-time visibility into stock and orders.	
IoT-Based Smart Plant Monitoring System	06/2023 – 11/2023
Embedded C ESP8266 Arduino IDE Blynk IoT DHT11 Soil Moisture & PIR Sensors WiFiManager LCD I2C	

- Developed an IoT system to monitor soil moisture, temperature, humidity, and motion in real time using ESP8266 and multiple sensors integrated with the Blynk IoT platform.
- Automated irrigation based on live soil-moisture readings, with manual override, remote monitoring, and Wi-Fi provisioning via WiFiManager.
- Reduced manual plant-care intervention through real-time LCD status display and motion-detection alerts.

EXPERIENCE

Machine Learning Intern (2 Months)

SVIST, Kolkata | Ardent Computech Pvt. Ltd. | Kolkata, WB

- Worked across the end-to-end machine learning workflow — data cleaning, feature scaling, model training, and evaluation — on structured operational datasets.
- Collaborated with the team to optimize predictive algorithms and improve model performance.

CERTIFICATIONS

- NPTEL Computer Networks — Elite certification (12-week course)
- Udemy Full Stack Web Development — end-to-end modern web architectures and application deployment
